

## WORKERS' COMPENSATION THERAPY SERVICES

### A SUITE OF THERAPY OPTIONS FOR WORKERS' COMP HEALTHCARE INTERVENTIONS

TalkPath Live is a premier provider of therapeutic services nationwide for people of all ages facing an expansive array of challenges that can be effectively, affordably, and conveniently addressed via the vehicle of teletherapy. One of our specialty areas is expertly meeting the needs of workers' compensation clients, insurance companies, and claims adjusters as we conduct personalized evaluations and deliver customized treatment plans.

Individuals on workers' comp require targeted approaches and specific treatment modalities to reach their prescribed benchmarks and achieve their recovery goals. That's why TalkPath Live's uncommonly talented and dedicated team of service providers offers focused interventions in the following disciplines, leading our clients to the highest possible level of functioning and restored health.

**MENTAL HEALTH EVALUATIONS AND COUNSELING.** Workers' compensation policies may help cover mental health issues workers develop or experience following an on-the-job injury, including anxiety disorder, depression, post-traumatic stress disorder (PTSD), and stress. If a client's injury or condition disrupts their ability to perform their job, TalkPath Live's highly trained and licensed mental health clinicians can design a one-on-one counseling plan that is supportive, solution-focused, and concentrated on regaining healthy coping skills.

**FUNCTIONAL CAPACITY EVALUATIONS (FCEs).** TalkPath Live provides FCEs, written in plain language, as this particular type of assessment helps determine a client's current physical abilities. When conducted by our licensed physical and occupational therapists, an FCE aims to identify an individual's physical skills, functional capabilities, activity endurance, and work tolerances. The tests performed are completed in an unbiased manner and use validity measures to compare subjective reporting with the person's actual physical capabilities.

**WORK HARDENING/WORK CONDITIONING.** After a client is discharged from an acute care setting, TalkPath Live's physical and occupational therapists, in conjunction with a physician, create intensive programming to prepare the client's musculoskeletal, cardiopulmonary, and neurological systems for their workplace requirements. This area of specialization addresses issues of physical tolerances, safety education, and worker productivity, resulting in a more successful return to work.

**SPEECH, VOICE & COGNITIVE THERAPIES.** Following a workplace injury, clients sometimes experience changes in their speech clarity, in their vocal quality, or in how they process and remember information. TalkPath Live's certified speech-language pathologists are experts in diagnosing and treating brain injuries that cause speech, vocal, and cognitive deficits. Our therapists are uniquely trained to address neurological changes that occur due to workplace injuries so that our clients can regain skills or compensate successfully to perform their work duties.

*TalkPath Live is a vibrant and always-evolving organization of caring professionals dedicated to both embracing and promoting inclusivity across all channels while fostering a sense of belonging among our entire community of staff and clients.*
